Ethereumsc Project

ETHSC is a project that has been developed since January 2020. From the beginning of its implementation, excellence has always been the focus of each improvement.

It is made out of a community that works with tokens in many areas, such as rentability, storage, and online payments.

Vision

ETHSC believes that Blockchain technology can transform and innovate the financial market. The speed of the transactions and independency from financial institutions is an evolution. People from every part of the world can send their tokens for each other, and better, with no bureaucracy and no need for approval of any financial organization.

Specifications

Based on the Ethereum Decentralised Network, ETHSC is an ERC-20 token recorded on the intelligent address contract:

0xcfd069247bd5f01a17f1ca76424c9e424256908d

Name: Ethereumsc

Symbol: ETHSC

Decimals: 18

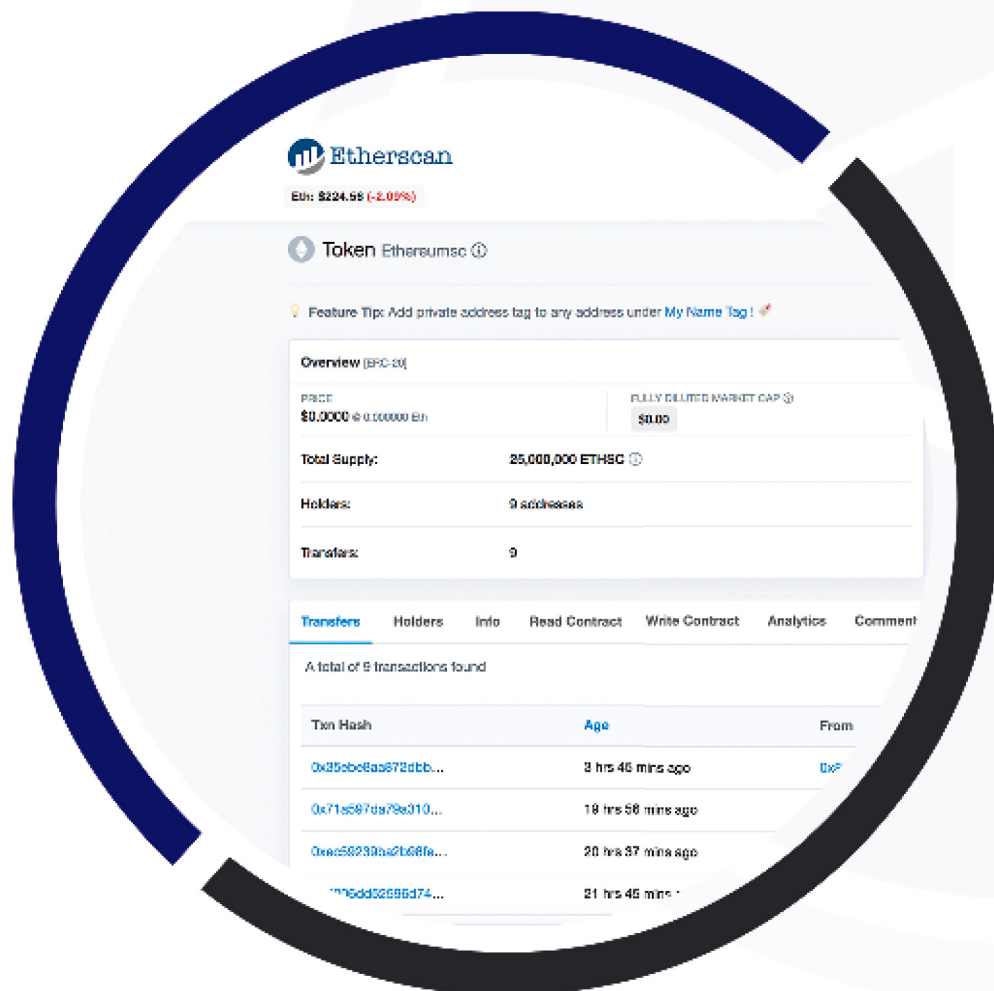

Max Supply: 25,000,000 Tokens

Initial value: US\$ 1.00

Etherscan

All the transactions are through the Etherscan, the best and biggest intelligent contract network of the world. ETHSC's technology comes from the Etherscan, providing more safety for its users.

The screenshot displays the Etherscan interface for the Ethereum (ETH) token. At the top, the Etherscan logo is visible, along with the current price of ETH at \$224.99, showing a decrease of 2.09%. Below this, the token is identified as 'Token Ethereumsc'. A feature tip suggests adding a private address tag to any address under the 'My Name' tag. The main section is titled 'Overview (ERC-20)' and provides the following data:

PRICE	FULLY DILUTED MARKET CAP
\$0.0000 @ 0.000000 ETH	\$0.00
Total Supply:	25,000,000 ETHSC
Holders:	0 addresses
Transfers:	0

Navigation tabs include Transfers, Holders, Info, Read Contract, Write Contract, Analytics, and Comment. Below the tabs, it states 'A total of 0 transactions found' and displays a table of transactions:

Txn Hash	Age	From
0x35be8aa872bbb...	8 hrs 45 mins ago	0xP
0x71e87da79e310...	18 hrs 58 mins ago	
0xccc56230aa2168fa...	20 hrs 57 mins ago	
0x95dd52685d74...	21 hrs 45 mins ago	

Obstacles

Currently, the biggest issues of tokens is the acceptance of this new technology around the globe, for its regulations still are being discussed among countries. But at the same time, big businesses and nations already recognize the Tokens and accept them as a payment method.

Solution

ETHSC is here to be an asset to the market, making it more accessible and with an estimated valuation. Therefore, everybody can buy and grow with the company. Working to speed up the acceptance of digital assets on the common market, creating a new product with several benefits.

Tokens and new projects are created every day, but only a few actually have the intention of solving the digital economy issues. The solution will only be reached when the market and its users understand the importance of Tokens and its technology for the world.

Token's Distribution

ETHSC's Max Supply is of 25,000,000 tokens, divided into five annual rounds of 5,000,000, and all of them, 100% available on the market to buy and sell.

June 27th of 2020 - 5,000,000 for sale

June 27th of 2021 - 5,000,000 for sale

June 27th of 2022 - 5,000,000 for sale

June 27th of 2023 - 5,000,000 for sale

June 27th of 2024 - 5,000,000 for sale

Expected Appreciation

ETHSC is a token that does not have an ICO, which means that it already starts as a Token that after its launch, automatically, is allowed to circulate in the market with high liquid; ETHSC will be launched for US\$ 1.00 and sold on the exchanges. And its increase and appreciation will be according to the annual sales round, being:

1st Round of sale 5,000,00 launched in June 27th of 2020.

2nd Round of sale 5,000,00 launched in June 27th of 2021.

3th Round of sale 5,000,00 launched in June 27th of 2022.

4th Round of sale 5,000,00 launched in June 27th of 2023.

5th Round of sale 5,000,00 launched in June 27th of 2024.

As other digital assets, ETHSC can not have a guarantee on its price in the digital financial market. However, to keep the Token active and busy, the Ethrereumsc search for partner businesses

APIs

API (Application Programming Interface), is a range of programming patterns, which gives access to a platform or app. One great example of the API use is in software businesses where they can communicate and associate with each other. This connection among the systems will be used to communicate with the businesses that have the desire to partner with ETHSC. On the ETHSC token this communication is through the Ethereum network.

Roadmap

June 2020

Launch/Circulation.

June 2020

1st Sale Round
(more 5,000,000
new tokens)/
available on exchanges.

June 2020

Listed on Coinmarketcap
and Coingecko

August 2020

Available at Altmarkets
stock exchange.

August 2020

Available on a new exchange.

September 2020

Available at the exchange crex24.

September 2020

1st online event (Subject:
Trade and circulation
of Ethereumsc).

June 2021

2nd Sale Round
(more 5,000,000
new tokens)

June 2022

3rd Sale Round
(more 5,000,000
new tokens)/
available on exchanges.

June 2023

4th Sale Round
(more 5,000,000
new tokens)/
available on exchanges.

June 2024

5th Sale Round
(more 5,000,000
new tokens)/
available on exchanges.
